Safety Instructions:

- Make sure that the cabinet is placed on a stable, level surface to ensure stability, safety and protection against tipping over. Use the levelling screws to adjust for unevenness.
- Use the three-point espagnolette lock or the cylinder lock properly to prevent unauthorised access. Check the locking mechanisms regularly.
- Take care not to exceed the maximum load of 50 kg per shelf to avoid structural damage and injury.
- If necessary, secure the cabinet to the wall to prevent it from tipping over, especially in areas with children or high public traffic.
- Children should not use the cabinet as a play object and should be kept away from it to avoid injury and danger, especially from crushing or suffocation.
- Check regularly that all screws and connections are tight to ensure stability.
- Avoid contact with water and aggressive chemicals to prevent damage to the material.
- Follow the assembly and operating instructions carefully to ensure safe use of the cabinet.
- Use shelf supports to hold the shelves securely and prevent them from falling out.
- Do not use the cabinet outdoors or in damp environments, it is intended for indoor use.
- The wooden doors should only be opened up to a maximum of 110° to prevent damage to the hinges.
- Avoid using the cabinet as a step or support for reaching objects.
