**E-Mail:** info@topstar.de

Please note the technical data of the products!

**Article Numbers:** 140732, 140731, 140730

### Safety Instructions:

- Maximum load: Do not exceed 110 kg. Seating furniture should not be used for users weighing more than 110 kg in order to avoid possible breaks in the material. Overloading can lead to damage or injury.
- Adjust the backrest and seat height to your height to ensure optimum support. Improper adjustment can lead to unhealthy sitting postures. To avoid injury, make sure that the height of the chair is set correctly before you sit down.
- When sitting for long periods of time, take regular breaks to avoid back pain.
- Ensure that the chair is placed on a stable surface and is only used on the intended surfaces to ensure stability and safety.
- Avoid leaning on the backrest if the chair is not correctly adjusted.
- Do not overload the accessory and adjustment mechanisms. Ensure that all mechanical adjustments function correctly and safely before using the chair. Ensure that all mechanical parts are correctly installed to avoid safety risks.
- Only clean the cover with suitable cleaning agents. The fabric cover should be cleaned regularly to avoid allergies caused by dust or dirt.
- Set up out of the reach of children to avoid the risk of injury.
- The safety double castors are only suitable for carpeted floors; instability may occur when used on hard floors. The use of soft floor castors is recommended to prevent damage to floors.
- Keep small objects away from the seat to minimise the risk of tripping.
