Please note the technical data of the products!

Article Numbers: 152997, 152996, 152995, 152994

Safety Instructions:

- Caution: Sharp edges and corners - risk of injury when handling the transport crate. Ensure protection during transport.
- The transport crate is a heavy load. Appropriate safety precautions must be taken when lifting to avoid back injuries. Use suitable lifting techniques.
- Avoid pushing the crate when the lid is closed. Take care when closing, as the gas pressure damper can cause rapid and uncontrolled closing. Before closing, make sure that there are no body parts in the hinge area to avoid crushing injuries.
- The crate should not be loaded beyond the maximum specified load. Observe the appropriate weight and volume.
- The use of padlocks is recommended to prevent unauthorised access to the contents. Ensure that the crate is properly locked to prevent unauthorised opening during transport.
- Do not place upside down to avoid the risk of falling. Only store and transport the product on level surfaces to prevent it from tipping over.
- Do not use gas pressure dampers improperly to avoid injury.
- The aluminium transport crate is corrosion-resistant, but protective measures should be taken if it is to be stored outdoors for long periods.
- Children should be kept away from the transport crate to prevent accidents.
- Only use for the intended purpose. Improper use can lead to damage or injury.
