Safety Instructions:

- Prevent serious injury from improper lifting or stacking: ensure safe and ergonomic handling.
- Avoid risk of suffocation due to improper handling or storage of small parts.
- Ensure that the product complies with the technical safety requirements in accordance with the General Product Safety Regulation.
- Only use the product in intended areas of use to avoid damage and injury. Do not use for explosive or reactive materials.
- For high temperature applications: Use only in the operating range of -40°C to +60°C to prevent material failure.
- When using with chemical substances, wear suitable protective equipment to avoid skin contact with chemical contents.
- Dispose of the container in accordance with local regulations for plastics and recyclable materials.
- Do not use with unsuitable liquids that could cause chemical reactions.
- Do not exceed the maximum stacking load: Maximum weight per stack is 4 tonnes.
- Before use, ensure that the container is standing on a stable, level surface and that the runners are undamaged.
- Do not store near open flames or excessive heat.
- Do not stack above the maximum stacking height to avoid tipping.
- Ensure regular hygienic cleaning of the container, especially when used for food.
- Before contact with food, ensure that the container is clean and hygienic.
- Do not stack if containers are damaged or defective.
- Ensure that the maximum load in the stack does not exceed 4 tonnes.
- Ensure that the product is food-safe and treat it accordingly.
