Safety Instructions:

- Use only on level, stable surfaces and check the stability of the rolling platform before use.
- Before use, ensure that the castors can be locked and check that the castors are correctly locked before climbing on to prevent tipping or shifting; risk of accident due to unsecured castors.
- Do not use improperly at an angle of inclination greater than 15°.
- Handrail must be installed for use from a platform height of 1.00 m; install safety railing for platform heights above 1000 mm.
- Always ascend and descend head-on and with both hands on the railing; follow the safety instructions for using the railing.
- Use by trained persons with personal protective equipment, use only by trained personnel.
- Pay attention to safety in wind and weather conditions.
- Choking hazard and risk of falling due to improper use or improper handling. Loose parts can pose a choking hazard.
- Avoid overloading the platform and observe the maximum user weight to prevent structural damage or accidents.
- The platform height is up to 1.90 m; note the risks when climbing up and down.
- When installing handrails, they must be fitted in accordance with the instructions.
- Keep the area under the roller platform free of obstructions.
- Wear suitable shoes to avoid the risk of slipping.
- Wear gloves during assembly and handling.
