

Product Safety Information

Stacking tipper BSK 150, for traverse emptying

Please note the technical data of the products!

Article Numbers: 73526, 73527, 73524, 73523, 73525, 73528

Safety Instructions:

- Observe the maximum load capacity of 2000 kg to avoid overloading and structural damage. Safety risk due to overloading can lead to tipping over.
- Ensure safe handling during lifting and transport in accordance with the instructions. Product safety is ensured by following the instructions for use.
- Observe materials and design to minimise mechanical risks such as pinching.
- Product is heavy (140 kg painted, 154 kg galvanised) and should be moved using suitable lifting and transport equipment to avoid injury.
- No contact with sharp or corrosive chemicals to avoid corrosion. Outdoor use only under consideration of weather-related influences.
- Do not stack above the intended stacking heights to avoid stability risks. Regularly checking the stability of the support legs is recommended.
- Protect the container from extreme weather conditions to prevent corrosion. Check regularly for damage.
- Product must not be used in the vicinity of children in order to avoid injuries due to overweight or improper handling.
- Warnings for safe use must be clearly visible on the product to prevent accidents. Provide safety information in easily understandable language.
- Only use the product in accordance with the specified instructions to avoid accidents such as suffocation due to improper handling of the tray contents.
- Use by trained personnel only is recommended. Risk of improper storage can lead to tipping and stability problems.
