Safety Instructions:

- Shelving must be secured against tipping if the height/depth ratio is $\geq 5:1$ (wall or floor anchoring).
- Only use the shelving in accordance with the specified load capacities: Shelf load max. 60 kg and bay load max. 350 kg.
- Ensure that all screws and fastenings are firmly tightened before use.
- Avoid overloading the shelves beyond the specified load capacity.
- The use of an end cheek at the end of the shelf is necessary to ensure safety and stability.
