Article Numbers: 134647, 134646

Safety Instructions:

- Risk of suffocation due to improper handling of tightly closed containers.
- Fire hazard due to improper storage of flammable liquids. Suitable safety measures must be taken when storing flammable liquids.
- Ensure a proper, technical forced ventilation system. The technically prescribed forced ventilation must be functional at all times.
- Observe the maximum load capacity of 1000 kg/sqm.
- Regularly check the insulated outer skin for damage. Check the insulating coating regularly for damage.
- Use of suitable protective equipment when handling hazardous substances.
- Use only for water-polluting substances of GHS category 1-4.
- Before opening or filling, ensure that the container is tightly closed.
- Observe a collection volume of 275 litres to avoid overflows.
- Attach safety information to the container in a clearly visible position.
- The container must be placed on firm, stable ground to prevent it from tipping over.
