Safety Instructions:

- Necessary protection against tipping over when heavy materials are stored or if the load is uneven.
- Observe safety measures when lifting the shelves and use suitable lifting techniques to avoid injuries.
- Know the weight of the cabinet (59 kg) and use suitable transport aids. Do not overload the cabinet.
- The cupboard doors can be locked with a key - protection against unauthorised access: keep the key safe.
- Keep the cabinet doors closed during use and open them carefully to avoid accidents and injuries.
- Only suitable for use by adults. Children must be denied access in order to avoid danger.
- Avoid storing heavy objects on the upper shelves to prevent the cupboard from tipping over and do not exceed the load capacity of the shelves (50 kg).
- The product is made of steel; beware of sharp edges that can cause injury.
- Improper assembly or use may result in the cabinet tipping over or insufficient stability. Always place the cabinet on a stable, level surface.
- The product is not suitable for installation in damp rooms. Protect from direct sunlight and moisture.
- The total load of the usable shelves must not exceed 50 kg. Maximum 50 kg per shelf.
- Wear suitable protective equipment when assembling and disassembling the cabinet.
- Slow loading: Start filling the open-fronted storage bins from top to bottom to prevent tipping.
- Observe specific safety instructions for the use of the material.
