Safety Instructions:

- Only use the assembly portal with compatible base tables and workbenches from the Universal Special and Profi Special series to ensure stability and safety.
- The maximum load of 120 kg must not be exceeded in order to avoid accidents and structural damage.
- Safety information and instructions for safe installation must be included in the packaging and read carefully before installation.
- The product should be kept out of the reach of children as it is not designed for their use.
- Careful review of the installation instructions prior to installation and use is necessary to avoid improper use and injury.
- Ensure that the superstructure is properly secured to the table top to prevent it from tipping over.
- Keep the product mounted stably on the workbench to avoid the risk of tipping.
- Ensure that no objects can become trapped in the sliding or swivelling mechanisms during use to avoid injury.
- Avoid use in the event of improper handling, overloading or extreme conditions (e.g. high humidity, extreme temperatures), which can impair stability.
- Carry out regular inspections of the fastenings and connections to minimise safety risks.
- Only use the superstructure portal for the intended applications.
- Ensure a suitable working height of 1500 mm during use to achieve ergonomic benefits and avoid back injuries.
- Use suitable personal protective equipment (such as gloves and goggles), especially when using tools, to avoid injury.
- Avoid use by children and unsuitable personnel, as the product is designed for commercial use.
- Regularly tighten all fastening elements and check the product for material fatigue.
- Suitable for use above table or workbench tops, do not use as a free-standing unit.
- Additional stability can be provided by transverse stabilisation struts.
