Safety Instructions:

- Only use high-lift trucks within the defined load capacity of 1000 kg.
- Ensure that the high lift pallet truck is operated on a stable, level surface.
- Before lifting loads, adjust the fork height to the desired working height.
- Use the emergency shutdown if a malfunction occurs.
- Pay attention to the acoustic signal during the fork movements.
- Switch off the power supply before carrying out maintenance or repairs.
- Users must be instructed to read the safety and operating instructions.
- Small children and untrained persons must be kept away.
- Unauthorised persons should stay away during operation.
- Read the operating instructions carefully before use.
- Avoid lifting loads above the maximum lifting height of 800 mm.
- Check the product regularly for visible damage and malfunctions.
- Only charge the battery in accordance with the instructions and ensure that the charger is suitable for the mains voltage used.
- Carry out sensor tests regularly to ensure a fault-free lifting and lowering system.
- Communication in the event of problems or security incidents to the responsible parties as quickly as possible.
