Please note the technical data of the products!

Article Numbers: 166609, 166608, 166607, 166606, 166605, 166604, 166603, 166602

Safety Instructions:

- Risk of suffocation due to improper handling of magnetic components, play parts, accessories or small parts (e.g. magnets).
- Use of neodymium magnets required: Standard magnets do not adhere, so only neodymium magnets or magnets specially designed for glass boards should be used to minimise the risk of adhesion and injury.
- Keep a minimum distance from electronic devices: Magnetic interference possible.
- Ensure that the wall mounting is stable to avoid the risk of falling and possible injury. Installation should be carried out by a qualified person.
- Use safety glass to reduce the risk of injury in the event of breakage. The glass can break or splinter, especially if it is installed incorrectly or in the event of a fall.
- Avoid violent impact or force on the glass panel to minimise the risk of breakage.
- Risk of injury from sharp edges of the glass panel if it breaks. Watch out for cuts caused by improper handling.
- Risk of scratching and damage due to improper handling. Do not deliberately scratch or handle with sharp objects.
- Risk of electric shock due to improper content of neodymium magnets.
- Avoid contact with water or damp cloths to prevent damage to the glass surface.
- After use with blackboard pens or chalk markers, ensure that no residue remains on the glass surface.
- We recommend wearing safety goggles during installation.
