Safety Instructions:

- Before stacking, ensure that the transport boxes are correctly stacked and positioned on a stable, flat surface to prevent them from tipping over.
- Never load the boxes above their maximum load capacity: Observe the specific maximum weights to avoid structural damage and injury.
- Always ensure that your hands are protected with protective gloves and goggles, especially when working with sharp edges or pointed objects.
- The boxes are not suitable for use in extreme temperatures, in direct sunlight or in the vicinity of naked flames.
- Keep children away from using the box, as small parts can lead to a choking hazard and the box could otherwise be misused as a seat.
- Use the integrated safety handles and, if necessary, lever clamps with care to avoid slipping or crushing injuries.
- For commercial use, the boxes should be checked regularly for wear and should only be operated by trained personnel.
- Do not use for transporting live objects, perishable goods or as a seat.
- Protect the box from extreme weather conditions, even if there is some corrosion resistance.
- Ensure that the hinged lid and latches are secured during transport to prevent injury from unintentional opening.
