Safety Instructions:

- Maximum load capacity of the chair: 120 kg. Take care not to load the chair beyond the recommended load capacity in order to avoid safety risks.
- Regular inspection of the mechanical functions and adjustment mechanisms for safety and functionality is recommended to ensure stability and correct operation.
- When using an office chair, it is important to adjust it correctly to your body size and sitting habits in order to avoid poor posture and health risks. This includes, for example, the correct seat height, backrest and ergonomic use of the armrests.
- Ensure that the office chair complies with the relevant safety standards and is placed on a stable, suitable surface to minimise the risk of tipping or slipping.
- An appropriate posture is also important for prolonged use (over 8 hours) and regular breaks should be taken to avoid tension.
- Children under the age of 14 should not use the chair in order to minimise the risk of injury.
- Take care with moving parts to avoid crushing or impact injuries. Also make sure that small parts are out of the reach of small children to avoid the risk of suffocation.
- To prevent injuries caused by slippery surfaces, the chair should be placed on castors suitable for the surface and kept clean regularly.
- Clear instructions on the safe use, assembly and care of the chair should be provided to prevent improper use.
