Safety Instructions:

- Observe safety precautions when handling water-polluting substances.
- Only allow trained personnel to handle, install and use the appliance.
- When storing flammable liquids, ensure earthing/potential equalisation and only store with approval.
- Protect shelving containers from rain and extreme weather conditions.
- Carry out regular inspections of the drip tray and the racking container for leaks, corrosion and damage.
- Do not overload the shelf container and only use it for the intended hazardous substances.
- Provide access to and access the safety data sheets of stored substances.
- Wear the necessary protective equipment when handling hazardous substances.
- Comply with all safety regulations for the storage of hazardous substances before using the storage container.
- Regularly check and clean the 1000 litre drip tray for leaks and leaks.
- The shelving container must be properly secured for safe use and used in the authorised areas.
- Use outdoors with earthing if flammable liquids of GHS 1-3 are stored.
- Regular inspection and recording of the corrosion condition of the material is required.
- Ensure ventilation and removal of substances to avoid the risk of suffocation.
- Close the container securely to prevent leaks.
- Ensure regular training of personnel in the handling of hazardous substances.
- Only use suitable pallet trucks or forklift trucks for transport.
- Keep the shelving container clean to reduce the risk of slippery surfaces.
- Comply with the disposal guidelines for hazardous waste in accordance with the regulations.
- Clearly and visibly affix labels for hazardous materials.
- Make access to storage levels safe to prevent falls.
