**Article Numbers:** 94099, 94098, 94097, 94096, 94095, 94094, 94083, 94082

### Safety Instructions:

- Not suitable for use by children under 3 years of age due to choking hazard from small parts.
- The product should be protected from direct sunlight and heat sources as it has a temperature resistance of -20°C to +100°C; avoid temperatures outside this range to prevent deformation.
- Protect against contact with strong and aggressive chemical substances such as acids, alkalis and oils, even if the material is generally resistant.
- If handled incorrectly, there is a risk of injury when lifting heavy loads; always use the handles, ensure a secure footing and observe the recommended capacity.
- Do not heat above the maximum temperature of 100°C to avoid material deformation or damage to the polypropylene.
- Ensure that the Euro Box is not overloaded when used in automated systems to prevent it from tipping over.
- The box is not suitable for direct contact with food unless this is expressly labelled.
- Watch out for sharp or pointed objects to avoid damaging the box.
- The box should be stored in a dry place to maximise its longevity.
- Before use, check the box for damage and clean if necessary to maintain hygienic conditions.
