Safety Instructions:

- Do not overload: Do not exceed a maximum weight of 500 kg per floor and a bay load of 2500 kg.
- Ensure that the shelving is placed on a stable, level surface to guarantee stability and safety.
- Correct assembly: Follow the instructions for safe assembly exactly to ensure stability and prevent tipping.
- When storing small parts, use additional chipboard to store them safely.
- Check shelving regularly for wear, structural integrity and correct use.
- Distribute loads evenly to prevent the shelf from tipping or falling over.
- Use suitable protective equipment when handling the shelf.
- To avoid material damage, do not expose the shelf to direct sunlight or extreme temperatures.
- Attach safety warnings to minimise the risk of injury from improper use.
- Only use the shelf for its intended purpose and do not use it as a ladder.
- Watch out for sharp edges during installation and exercise caution.
