Safety Instructions:

- Observe the maximum field load of 4500 kg to avoid structural damage.
- Set up and align the shelf stably before loading, ensuring that it is fixed with the foot plates supplied.
- Always use safety pins and insert them correctly in order to fix the levels correctly.
- The shelf must not be overloaded, observe the maximum load per level (244 kg for 600 mm depth, 400 kg for 800 mm depth).
- Before use, ensure that all parts are correctly assembled, including the correct positioning and securing of the levels in a 50 mm grid.
- Wear personal protective equipment during use to avoid injury.
- Levels are adjustable in 50 mm increments; ensure that the levels are correctly positioned and secured.
- Use of a padlock to secure the locking mechanism is recommended.
- Shelving may only be used for the intended goods in order to avoid overloading.
- When storing heavy objects, distribute the weight evenly to prevent tipping or falling over.
- Position the shelf so that it cannot tip over, especially when heavily loaded.
- Avoid overloading the levels according to the specified maximum values.
- Safety information and assembly instructions must be enclosed with the packaging.
- Incorrect assembly or overloading can damage the shelving, which means that there is no protection for stored goods.
- Maintain sufficient distance from walls and other structures so as not to jeopardise stability.
- Users should use the product in accordance with the instructions provided.
