Article Numbers: 139060, 139025, 139024, 139022

Safety Instructions:

- Do not exceed maximum content load of 20 kg to ensure structural integrity and safety.
- Use ergonomic handles and handling to avoid physical strain.
- Use label fields for clear labelling to avoid confusion.
- Do not stack if products are not correctly aligned to prevent tipping.
- Only use for transporting small electronic and sensitive parts to avoid damage.
- Choking hazard due to small plastic parts: Keep out of the reach of children and avoid improper handling.
- Observe safety precautions in automated transport processes and train operators to minimise handling risks.
- Do not use containers made of electrically conductive plastic in damp environments or near water sources to avoid corrosion and the risk of electric shock.
- Observe the shelf life and stability of the containers to avoid overloading (maximum 20 kg).
- Ensure that the carrier is used in accordance with the safety requirements for electronic components to prevent ESD damage.
- When transporting sensitive small electrical parts, they should be used in accordance with the regulations in order to avoid damage.
