Safety Instructions:

- Maximum load per shelf: 50 kg to avoid overloading.
- Protect the cabinet against unauthorised access, use a security cylinder lock.
- Place the cabinet on a stable, level surface to prevent it from tipping over.
- Place out of the reach of children, as the cabinet is not suitable for use by children.
- Protect the cabinet from direct moisture, extreme temperatures and corrosion.
- Follow the manufacturer's instructions during installation to ensure safety.
- To avoid accidents and damage, do not open or close the double doors with excessive force.
- Risk of injury if the hinged doors are handled incorrectly; pay attention to this.
- Check the cabinet regularly for damage and ensure maintenance.
- Do not use sharp objects or chemical cleaning agents for cleaning.
- Use only for the intended applications and storage of non-flammable materials.
- When storing heavy objects, ensure even load distribution on the shelves.
- During installation, ensure that there are no sharp edges that could cause injury.
- Keep the key for the safety lock in a safe place to prevent unauthorised access.
- Do not store any explosive or highly flammable materials in the cupboard.
- Before closing the doors, make sure that no objects are blocking them.
- Anchor the cabinet securely, especially during use and transport.
- Avoid storing hazardous substances or chemicals in the cupboard.
- Provide users with instructions on the proper use and care of the product.
- When using the cupboard, pay attention to the load capacity of the shelves to ensure stability.
