Safety Instructions:

- Choking hazard due to small parts, keep product out of the reach of children.
- Risk of electric shock if electrical components are handled incorrectly. Only use electrical devices in dry environments, protect cables and sockets from water.
- Risk of injury due to improper handling of drawers and doors. Only use the drawer unit in accordance with the instructions provided.
- Not suitable for children under 14 years of age. Make sure that they do not use the product as a toy.
- Ensure that the cabinet is stable and placed on a level surface to prevent it from tipping over.
- Carry out regular inspections for visible damage or wear, especially on electrical components.
- Avoid overloading the electric shelves; observe max. load 70 kg.
- Ensure adequate ventilation and keep ventilation openings clear to prevent overheating.
- Stow cables and power supply units safely to avoid tripping hazards.
- Only use the cabinet in its intended area of use and keep it dry to prevent short circuits.
- Designation and labelling in understandable language, including user instructions and safety instructions, must be included.
- Installation and maintenance by specialists only. The manufacturer is responsible for compliance with safety standards.
- The product should not present any health and safety hazards in normal use. Clearly attach all necessary warnings (e.g. sharp edges, heavy weight).
- Regularly check the stability and burglar resistance of the cabinet and regularly maintain the cylinder lock.
- Keep the room well ventilated to prevent the electrical components from overheating.
- In the event of unusual noises or technical faults, disconnect the appliance from the power supply immediately and contact the dealer.
- Use only in the intended area. Do not place any heavy or sharp objects on plastic parts.
