Safety Instructions:

- Shelving with a height/depth ratio greater than 5:1 must be secured against tipping, e.g. by wall or base anchoring or head bracing, in accordance with DGUV Rule 108-007.
- The specified load capacities only apply to evenly distributed loads per shelf; maximum load capacity per level is 150 kg.
- The shelf is designed exclusively for manual loading, no mechanical loading permitted.
- Ensure that all safety and assembly instructions are followed to avoid instability and accidents.
- Safety instructions and assembly instructions must be provided in an understandable language.
- Check shelves regularly for stability and wear and take changes to the room design into account.
- Keep all safety-related documents for future reference.
- When mounting, attach additional stability elements in accordance with the manufacturer's instructions.
