Safety Instructions:

- Ensure that the shelf is correctly assembled and stable to prevent tipping or structural damage.
- Observe the maximum load capacity: Shelf must not carry more than 250 kg to prevent overloading.
- Only install shelving on level, stable surfaces to ensure stability.
- Keep the shelf away from sources of moisture and extreme temperatures to avoid material changes.
- Avoid overloading the shelves to prevent structural instability and accidents.
- Check shelving regularly for stability and damage and repair or replace if defective.
- Provide all installation instructions and safety information to users in understandable language and follow them exactly.
- The parts used are included in the scope of delivery and must be installed in accordance with the manufacturer's instructions.
- Take care to keep children and unauthorised persons away from the shelf to avoid the risk of injury.
- Ensure that the loads are evenly distributed and that no unauthorised or heavy objects are loaded onto the upper compartments.
- Secure the shelf to the wall or stable structures to minimise the risk of it tipping over.
- Regulate the use of only recommended accessories to ensure compatibility and safety.
- Use protective measures during assembly, e.g. suitable tools and equipment, to prevent injuries.
- Observe the operating instructions and product specifications during installation and storage.
