Safety Instructions:

- Shelving with a height/depth ratio greater than 5:1 must be secured against tipping, e.g. by wall or base anchoring or head bracing. Secure the shelving in accordance with DGUV Rule 108-007 (BGR 234).
- The maximum load of 250 kg per shelf with an evenly distributed load must not be exceeded.
- The shelf should be loaded evenly and not overloaded to avoid instability and tipping.
- Ensure that the shelf is properly assembled, stable and follows the manufacturer's assembly instructions.
- Avoid overloading the shelves. Uneven load distribution can lead to tipping, so it is necessary to check the stability regularly.
- Keep the shelf away from children to avoid injury from tipping over or improper use.
- Only place the shelf on a stable surface.
