Safety Instructions:

- Shelving must be secured against tipping if the height/depth ratio is greater than 5:1 (e.g. by wall or base anchoring or head bracing).
- Only use the shelving in accordance with the maximum load limits, max. 250 kg per shelf with an evenly distributed load.
- Ensure that the shelf is stable and not overloaded to avoid the risk of falling and that it is placed on a stable surface.
- During assembly, ensure that the turnbuckles are properly secured and that turnbuckles are used to align and stabilise the shelving.
- Carry out regular inspections and maintenance of the integral parts of the racking to detect signs of damage or instability.
- Keep all installation and operating instructions to hand and observe the safety information in them.
- The shelf should be used under the supervision of trained personnel to avoid accidents.
