Article Numbers: 402669, 402667, 402666, 402665, 402662, 402661

Safety Instructions:

- Place the cabinet on a stable and level surface to prevent it from tipping and to increase safety. If the floor is uneven, use a floor leveller of 25 mm and secure to the wall if necessary.
- Only use the cabinet for its intended purpose and avoid the risk of being hit when handling heavy tools.
- Do not exceed the maximum load of the shelves (up to 150 kg per shelf). Observe the maximum load capacity of the cupboard (do not load over 450 kg).
- Store heavy objects on the lower shelves, install the shelves correctly and check their stability and integrity regularly.
- Protect the cabinet and its contents from heat sources, moisture, aggressive chemicals and rust. Do not block ventilation openings to prevent moisture and mould growth.
- Check the cylinder lock regularly for proper functioning and use it to securely store valuable items and prevent unauthorised access.
- Ensure that the doors are fully open to avoid crushing hazards and keep hands away from hinges.
- Children should not use the cabinet as a toy and use should be under adult supervision if children have access to tools.
- The cabinet should be kept dry to prevent rust formation.
