Safety Instructions:

- Do not store more than 1000 kg in the entire cabinet and specifically up to 200 kg per compartment.
- Always lock the hinged doors and the cylinder lock to prevent unauthorised access.
- Store small parts safely to avoid injury.
- Even load distribution during filling to prevent overturning.
- Regular inspection of the cabinet for mechanical damage, malfunctions and the condition of the doors and lock.
- The product is heavy, so it should be securely mounted on a stable and level surface to prevent it from tipping over.
- Follow the installation instructions exactly to avoid damage or injury.
- Do not load with hazardous or chemical substances that can cause material damage.
- Keep the cabinet away from children or supervise them when they are present to avoid accidents.
- Protect the cabinet from direct sunlight, heat sources, moisture and aggressive chemicals to ensure the integrity of the material.
- Avoid overloading and adhere to the maximum load capacity to prevent structural damage.
- Distribute heavy objects evenly to avoid uneven loading.
- Ensure that doors close properly to prevent unintentional opening.
- Observe safety measures when lifting and storing heavy objects.
