En principe, tous nos papiers sont adaptés à une utilisation quotidienne au bureau sur des machines de bureau standard, sauf s'ils sont marqués pour des applications spéciales (comme le papier thermique pour les télécopieurs). Même le papier écologique a maintenant des propriétés très représentatives pour le fonctionnement de la machine. Le choix du papier est donc principalement déterminé par l'utilisation prévue, le procédé d'impression utilisé, les considérations environnementales et - de plus en plus - la résistance au vieillissement conformément aux normes.
